

Plaintiff Cards PRD

Owner: @Jackson Breckenridge, Legal Product Manager

Last Updated: 2/24/26

Other Key Stakeholders: @Sarah , Ariel

Executive Summary

This Product Requirement Document (PRD) outlines the delivery of a card-based interface for plaintiffs that allows attorneys to easily investigate risk profiles, identify weak cases, and make rapid "Consider" or "Reject" decisions on individual plaintiffs.

Objectives

The high-level purpose of the Plaintiff Card is to translate complex, pre-existing spreadsheet logic and insights into an intuitive visual format conducive to quick review. By slotting insights into appropriate, color-coded tags and summaries, the cards aim to prompt immediate investigation and action, allowing users to efficiently discard weak/fraudulent cases or identify high-risk cohorts.

What's at stake?

While the backend insights have already been created, attorneys cannot efficiently synthesize dozens of data points per plaintiff in a raw spreadsheet format. They need a consolidated system that effectively highlights the most critical risk factors—such as alternative causation or lack of exposure—so they can rapidly determine if a plaintiff's claim is credible.

Giving them this tool will allow them to easily isolate viable plaintiffs without getting lost in a spread sheet.

In Scope

- **Card UI Rendering:** A responsive card-based interface displaying plaintiff demographics, case IDs, and attorney information.
- **Dynamic Tagging System:** Logic to map existing spreadsheet insights to color-coded UI tags (e.g., Yellow for informational tags like "PD" or "Age 76"; **Red for risk tags** like "Family Hx").
- **Risk Factor Summaries:** An expandable "Less/More information" section presenting plain-text summaries of pertinent risk factors.
- **Action Workflows:** "Consider", "Reject", and "View full profile" buttons integrated directly into the card.
- **Connections** - will sit on top of KANBAN and lend data directly from Case Spreadsheet/Plaintiff DB

Out of Scope

- **Creation of New Insights:** The underlying logic for cross-field arithmetic, alternative causation, and provider patterns is already complete; this PRD only covers surfacing that data.
- **Calculating missing metrics:** (e.g., visit duration or medication dosage) that do not exist in the current schema.
- **Plaintiff Scores:** Assigning strength or viability of plaintiffs based on the collection of their data

UI Requirements:

#	User Story Title	User Story	Priority	Notes
1	Identification Details	Reviewing plaintiffs, I must be able to identify which plaintiff I am looking at	Must Have	<code>plaintiff.name</code> , case #
2	# of Risk Flags	As an attorney quickly working through plaintiff cards, I need to know immediately how many "high risk" attributes the plaintiff has	Must Have	Subsection ranking and "critical" issues defined below
3	Critical Flags	As an attorney I want a summary of datapoints that are critical to quick examination of exposure or diagnosis dismissal of the plaintiff	Must Have	Defined in "TAGS" table below
4	Visual Tag Category Differentiation	As an attorney dealing with thousands of plaintiffs, I need simple visual cues to understand what details I should be prioritizing as I review a plaintiff	Must Have	Colour code Critical (brighter colour) vs. Important (lighter/more muted colour)
5	Linking to complete plaintiff profile - "View Full Profile"	As an attorney investigating the plaintiffs, the insights must be responsive to a click for me to dig further into the data.	Should Have	Link back to the case spreadsheet row of the affected Plaintiff, filtered/sorted as described per variable. Also when clicking "View Full Profile", go to the relevant row without any filtering.
6	Expanded Details	As an attorney if there is a borderline case, I want to	Should Have	Collection of the NOTES fields from, for example, Diagnosis Notes, Family History Notes, Head Injury notes, etc.

#	User Story Title	User Story	Priority	Notes
		learn more non-critical details		
7	Limited tags	As a user, more than seven tags will be confusing, I want to quickly identify characteristics of the plaintiff that are important and substantive	Must Have	Leave out any tags not relevant to the particular plaintiff (see notes in TAGS table below). If more than 7 tags apply, include only Critical tags.
8	"Considering" Button	As an attorney considering this data, I want to retain important plaintiffs in a separate flow that gets saved in the Kanban structure for current and future consideration.	Must Have	Moves from first to second section of Kanban defined here: https://www.notion.so/theoai/Bellwether-Kanban-Board-PRD-3119f52e6e7b807e9952e480ab3629e1?source=copy_link
9	"Reject" Button	As an attorney, some files do not meet the minimum criteria necessary to proceed with a claim. I need to be able to quickly dismiss these from the Kanban consideration	Must Have	See above

TAGS

Priority	Name of Tag	Field	Why It Matters	Default
Critical	No PD Dx	medical.injury.diagnosed = not Parkinson's Disease	No PD diagnosis = no case	If data is empty simply do not include tag on affected plaintiff's card.
important	No recollection of Paraquat	paraquat.recalls = no	Plaintiff can't recall using it — exposure called into question	If data is empty simply do not include tag on affected plaintiff's card.
Critical	Pre-1964 Exposure	product.use.start vs. 1964	Pre-commercial exposure = hard disqualifier	If data is empty simply do not include tag on

Priority	Name of Tag	Field	Why It Matters	Default
				affected plaintiff's card.
Important	Self-Reported Diagnosis	medical.injury.proof.source = PPF, Complaint or Affidavit only	Self-report only = no documented injury basis (response type: PPF, Complaint, or Affidavit indicate self-reporting)	If data is empty simply do not include tag on affected plaintiff's card.
Important	Bystander Exposure Only	product.exposure.type = only Bystander exposure and/or Residential exposure	Bystander/residential only = legally and scientifically weaker nexus. Worth flagging exactly which type of exposure.	If data is empty simply do not include tag on affected plaintiff's card.
Important	Family PD Hx	medical.history.family.parkinsons.check = Yes	Alternative cause of the disease	If data is "No" or empty simply do not include tag on affected plaintiff's card.
Important	Parkinson-mimicking Drugs	medical.treatment.pharmaceuticals.check = Yes	Dopamine antagonists can cause drug-induced Parkinsonism	If data is "No" or empty simply do not include tag on affected plaintiff's card.
Critical	Genetic Testing	medical.genetic.test = Yes	Genetic predisposition is a powerful defense argument	If data is "No" or empty simply do not include tag on affected plaintiff's card.
Critical	Head Injury	medical.history.head.check = Yes	TBI is an established independent PD risk factor	If data is "No" or empty simply do not include tag on affected plaintiff's card.

TABLE LIST

Order	Name of List Item	Field	Why It Matters	Default
1	State of Residence	complaint.residency	Key for litigating	Always include in list format on card.
2	Attorney	complaint.attorney	Key for litigating	Always include in list format on card.

3	Law Firm	<code>complaint.firm</code>	Key for litigating	Always include in list format on card.
4	Latency	<code>medical.injury.diagnosis.date</code> - <code>product.use.start</code> = latency	Latency is important for understanding causal relationships. A diversity of this will be helpful in the final bellwether pool.	Always include in list format on card.
5	Age at Diagnosis	<code>medical.injury.diagnosis.age</code>	Age at diagnosis (76+ skews toward idiopathic PD)	Always include in list format on card.
6	Age at 1st Exposure	<code>paraquat.exposure.age</code>	Childhood exposure is likely a bystander exposure rather than workplace impact and flags claim integrity issues	Always include in list format on card.
7	Total Exposure Time	<code>product.use.length</code>	Understanding the likelihood of exposure to injury correlation	Always include in list format on card.

Release Criteria

- Cards carry the correct data from the DB
- 100% of the time flags are accurate to the critical data present
- 100% of plaintiffs within spreadsheet receive a card
- User able to view 100% of plaintiffs' expanded information
- KE indicates a need for plaintiff card review

Success Metrics

- **Triage Velocity:** Attorneys able to conduct a preliminary review of plaintiffs within 30 seconds
- **Click-Rate Success:** Click rates indicate that attorneys are taking advantage of the platform and using the new feature
- **Time Savings:** KE attorneys assign a real time saving to using the card method vs. spreadsheet navigation
